Subject: Blast Door for Station 76-George

Dear Sir:

Reference is made to J-6 letter J-21399 dated November 6, 1953 on the above subject.

Mr. J. L. Shumway, IASL, was advised by telephone on November 12, 1953 that the present timber door is designed for blast and is adequate for pressures anticipated as a result of the recently revised test schedule. The door bears against the concrete wall of the station and not on an ordinary wooden door frame. It was indicated that this would satisfy all requirements.
